**TECHNICAL REGULATION CERTIFICATE & ROSTECHNADZOR PERMIT**

## **Technical regulation «Safety of Machinery and Equipment»**

New technical regulation «Safety of Machinery and Equipment» came in force on September 25, 2010. Presented technical regulation gave a minimum of detailed requirements for safety of machinery and equipment. New technical regulation covers industrial, home and similar equipment which is put on Russian market.

New technical regulation has specified two type of approval – certification and declaration. Both of them are obligatory to be presented for custom clearance. Also new technical regulation established new requirements for approval mark TP instead PCT.

Technical regulation certificate or declaration can be based only on Russian test reports which are issued by Russian accredited laboratories. Unfortunately there are practically no harmonized norms which could be accepted for Russian approval in machinery and equipment scope.

Holder of declaration (Declarant) must be only a Russian local company – resident of Russian federation. This company can act in the name of the manufacturer only based on an agreement between manufacturer and Declarant.

## **Rostekhnadzor approval**

If industrial equipment can be used in dangerous area, in this case such equipment must be approved in Rostekhnadzor approval system. Rostekhnadzor permit is a kind of safety certificate which confirms that certified equipment conforms to Rostekhnadzor requirements.

It is important to remember that Rostekhnadzor permit is voluntary document to custom clearance and put industrial equipment on Russian market. But it is obligatory document to set such equipment in operation.

Rostekhnadzor approval is issued by federal agency of industrial safety. Rostekhnadzor approval can be based on GOST R or TR certificate and act of expert examination which can be issued by accredited expert organization.

For your information, Rostekhnadzor approval can be applied and can be issued only for specified scope, for example like gas and oil area, construction area, chemical area, explosive area etc. An object of Rostekhnadzor permit can be only an equipment but not soft, services, materials etc.
