**TELECOM EQUIPMENT APPROVAL  
IN RUSSIA AND UKRAINE**

## **ALGORITHM OF TELECOM APPROVAL IN RUSSIA**

---

---

## COMMON TERMS IN RUSSIA AND UKRAINE

**Representative service.** In compliance with national technical regulations, declarant must be local (Russian or Ukraine) resident company only. If manufacturer doesn't have representative company in Russia or Ukraine, our company can provide representative service and support and to register declaration in relevant authorities in those countries.

**Foreign test reports and acceptance of certificates.** In compliance with national technical regulations, Russian GOST R and Telecom certificates and UKRSEPRO certificate can be issued and declarations can be registered only on the base of national test reports which are issued by accredited national laboratories. Technical regulations as a rule are not harmonized for different countries, and certificates which are issued in European countries or USA cannot be accepted in Russia and Ukraine on default. But if you provide us completed set of test reports we could try to avoid local retesting and factory audit. Our experts and engineers can study foreign test reports and if foreign test report includes completed information for approval purposes our certification body can accept Safety, EMC, Telecom, Radio test reports and other test reports for GOST R, UKRSEPRO and Telecom certification and for declaration procedure.

## RUSSIAN APPROVAL OF TELECOM EQUIPMENT

Our certification body provides turn-key solution to obtain telecom certificates and to register telecom declarations for telecom and radio equipment in Russia.

**GOST R certificate.** Our certification body is accredited by Federal Technical Regulation Agency to issue GOST R certificates and register GOST R declarations for telecom, radio and electronic equipment.

**Modular telecom approval.** You can legally approve module or end-user device in telecom system. It doesn't matter. It only depends on your choice. But approval for an end-user device is better way. If manufacturer approves only module, he must provide legal information for any officials, customers (for example importer, custom house etc) that the end-user device includes the module which was completely approved. Sometimes it may be difficult. We can offer discount to register telecom declarations if several models include identical modules.

## UKRAINE APPROVAL OF TELECOM EQUIPMENT

Our certification body has close collaboration with relevant certification bodies from Ukraine. This makes it possible to organize turn-key solution to obtain Ukraine certificates for IT equipment, electronic, telecommunication and radio equipment. UKRSEPRO certificate for telecom equipment must be approved by Telecom Ministry of Ukraine.

**EMC declaration.** There have been some changes in certification system in Ukraine from 2011 year. Now manufacturer must get 2 approvals for electronic equipment. Safety and telecom certificate and have to be registered EMC declaration. A local representative company must be obligatory pointed in declaration like a holder of this document.

We need to get completed information of equipment and safety, EMC and telecom or radio test reports to provide you our quotation. It may take about a week.
